

Drops of water and oil bead up and do not penetrate the surface of the felt.

CS17[®] Fluorocarbon Bath Treatment

CS17[®] dust release treatment is engineered for the efficient separation and release of wet, oily, fatty, sticky and agglomerating dust. As the base felt is totally submerged in the chemical bath during the manufacturing process, each fiber is encapsulated with the treatment providing excellent dust release from both the surface, as well as, the depth of the filter media.

Advantages of CS17[®]

- Superior release of difficult dusts
- Reduced blinding and clogging
- Higher flow rates
- Longer bag life
- Lower pressure drop
- High separation rates

Availability

CS17[®] dust release treatment is available on polypropylene, polyester, homopolymer acrylic, aramid, PPS, P-84[®] felts, and in an FDA approved version.

For a demonstration of how CS17[®] can provide significant benefits to your dust collection system, please contact BWF America at 1-800-733-2043.
