

We need a new photo of shaker dust collector.

Shaker Felts

A cost saving, maintenance reducing, life extending solution for shaker dust collectors

The shaker felt concept works because specially designed felts out-perform wovens and knits at every filtration measurement point. Felts offer the following advantages:

- Double the pore volume of wovens/knits
- Higher efficiency/lower emissions
- Minimal dusting after clean down
- Lower Δp
- Longer bag life
- Addition of special cake release and life extending finishes
- High strength and stability (no stretching)

Combined with sonic horns, shaker felts offer the opportunity for extraordinary bag life. Sonic horn cleaning is efficient and virtually maintenance free as all mechanical parts except dampers and conveyors are deactivated.

Major maintenance and parts costs are permanently eliminated. Shaker felts and sonic cleaning offer the potential for operators of shaker collectors to extend the life of the collector and bags, eliminate major maintenance costs and reduce emissions.

For a demonstration of how shaker felts can provide significant benefits to your dust collection system, please contact BWF America at 1-800-733-2043.
